

Memorial Sloan Kettering Cancer Center

14th Annual

DERMOSCOPY INTERMEDIATE COURSE

OCTOBER 5-6, 2018

ZUCKERMAN RESEARCH CENTER • NEW YORK

Memorial Sloan Kettering
Cancer Center

Course Overview

Dermoscopy permits the observer to visualize skin structures located below the stratum corneum that are not visible to the unaided eye. The morphology visualized through dermoscopy has led to improve clinical diagnostic accuracy with increased sensitivity and specificity for the detection of cutaneous malignancies.

Educational Objectives

By attending this course, attendees will be able to:

- Outline a logical and easy to follow framework for the dermoscopic evaluation of cutaneous lesions.
- Identify the features of both melanocytic and non-melanocytic lesions.
- Describe a management approach, based on dermoscopic findings, to correctly identify lesions requiring biopsy.

Target Audience

This educational activity is designed for Dermatologists, Family Physicians, General Internists, Nurse Practitioners and Physician Assistants.

Educational Workshop Room

Equipment will be available for hands-on practice and demonstrations for all participants during breaks/lunch.

Register by **August 17, 2018** for early rates:

The speakers were exceptionally knowledgeable. The images were very helpful and the algorithms helped to simplify the concepts greatly!

One of the best dermatology courses I have attended in 15 years in practice.
