# 13<sup>th</sup> Annual DERMOSCOPY INTERMEDIATE COURSE

Dermoscopy permits the observer to visualize skin structures located below the stratum corneum that are not visible to the unaided eye. The morphology visualized through dermoscopy has led to improved clinical diagnostic accuracy with increased sensitivity and specificity for the detection of cutaneous malignancies.

## Educational Objectives

- Outline a logical and easy to follow framework for the dermoscopic evaluation of cutaneous lesions.
- Identify the features of both melanocytic and non-melanocytic lesions.
- Describe a management approach, based on dermoscopic findings, to correctly identify lesions requiring biopsy.

## Target Audience

This educational activity is designed for Dermatologists, Family Physicians, General Internists, Nurse Practitioners and Physician Assistants.

## Reflectance Confocal Microscopy Workshop\*

### Role of Reflectance Confocal Microscopy as a Non-Invasive Diagnostic Tool in Routine Dermatology Clinics

Reflectance confocal microscopy (RCM) is a non-invasive device that images skin lesions at high resolution in vivo similar to traditional pathology. This workshop will help attendees develop familiarity with RCM technology and its role in imaging skin lesions in daily dermatology practice with live RCM demonstration. Participants can select one of the following session date/times:

**Friday, October 13, 2017 | 5:15-6:15 pm**

**Saturday, October 14, 2017 | 7:00-8:00 am**

Sign up for the Confocal Workshop during registration for the 13th Annual Dermoscopy course. Please be sure to register early - **space is very limited for each session.**

\*Please note that MSK will not be offering CME credit for the Confocal Workshop.
