Course Overview

The purpose of this course is to provide clinicians and scientists with an updated overview of the future of dermatology through the lens of medical informatics. There will be ample time for questions and discussions throughout the day.

COURSE OBJECTIVES

- Understand the opportunities and barriers to leveraging computer informatics for the diagnosis of skin cancers
- Understand the benefits of and challenges to the integration of dermatologic photography with electronic medical records (EMR)
- Understand the benefits, limitations and legal barriers of teledermatology
- Define the privacy issues associated with the use of dermatology images in the EMR, in patient communications, and in research in the era of cloud computing and public database

TARGET AUDIENCE

This course is directed towards clinicians, researchers, and industry motivated to help advance skin cancer diagnosis into the 21st century.
